## In the Claims

Claims 1-41 (Cancelled)

Claim 42 (Currently amended): A method for inhibiting the expression of Dengue virus genes within a mammalian host, said method comprising administering the vector of claim 25 to the host a vector comprising at least one gene suppressing cassette, wherein said gene suppressing cassette comprises a polynucleotide operably-linked to a promoter sequence, wherein said polynucleotide encodes a short interfering RNA (siRNA) molecule that reduces expression of a target Dengue virus gene within the host by RNA interference, wherein the polynucleotide sequence is transcribed to produce the siRNA molecule, and wherein the siRNA molecule is capable of reducing expression of a target Dengue virus gene within the host by RNA interference.

Claims 43-44 (Cancelled)

Claim 45 (Previously presented): The method of claim 42, wherein the host is suffering from a Dengue virus infection.

Claim 46 (Previously presented): The method of claim 42, wherein the host is not suffering from a Dengue virus infection, and wherein the vector is administered prophylactically.

Claims 47-50 (Cancelled)

Claim 51 (New): The method of claim 42, wherein the host is a human.

Claim 52 (New): The method of claim 42, wherein said vector comprises a plurality of gene suppressing cassettes.

Claim 53 (New): The method of claim 42, wherein said target gene encodes a structural protein.

Claim 54 (New): The method of claim 42, wherein said target gene encodes a non-structural protein.

Claim 55 (New): The method of claim 42, wherein said target gene is at least one gene encoding a protein selected from the group consisting of C, prM, E, NS1, NS2a, NS3, NS4a, NS4b, and NS5.

Claim 56 (New): The method of claim 42, wherein said polynucleotide comprises the nucleotide sequence of SEQ ID NO:3 or SEQ ID NO:4.

Claim 57 (New): The method of claim 42, wherein the vector is conjugated with chitosan or a chitosan derivative.

Claim 58 (New): The method of claim 42, wherein the target sequence is from 15 to 30 nucleotides in length.

Claim 59 (New): The method of claim 42, wherein the nucleotide sequence targeted by the siRNA is common to 2, 3, or 4 serotypes of Dengue virus.

Claim 60 (New): The method of claim 42, wherein the vector is administered to the host intravenously, intramuscularly, subcutaneously, intradermally, or ally, or intranasally.

Claim 61 (New): The method of claim 42, wherein the promoter sequence is an inducible promoter sequence.

Claim 62 (New): The method of claim 42, wherein the promoter sequence is a tissue-specific promoter sequence.
